

STARS ON STAGE

ERGOLINE PRESENTS NEW STARS IN THE PROFESSIONAL SUNBED PROGRAMME

Ergoline have a whole range of new products to start off the 2007 season. The market leaders will be presenting 3 new series with innovative UV technologies and comfort features. In addition to these, there is also the premiere of a superb new model in the Open Sun range.

DYNAMIC POWER

Ergoline are opening up a new chapter in UV competence with the future-oriented Dynamic Power technology. Dimmable electronic ballasts provide approximately 25% more UV output per watt of energy input and are guaranteed future-proof. The sunbeds are made into real adaptation artists by software-controlled power settings. Depending on the philosophy of the tanning salon, Dynamic Power sunbeds can, for instance, be operated with the emphasis on saving energy or at full tanning power. And this can all be done without changing lamps or carrying out conversion work on the sunbed. This means that adaptation to country-specific UV standards is also facilitated. Good to know: energy-saving mode extends the lamp's life to up to 1,200 hours. The corresponding power setting ensures even lamp control up to the maximum power level selected throughout each lamp's lifespan. All the Dynamic Power sunbeds can be delivered with an IQ-Sensor for an additional charge – for an individual tan from head to toe.

PRESTIGE SERIES

Prestige, the new top series from Ergoline, sets new standards for professional sunbeds. Prestige offers two new UV concepts: Dynamic Power (see info box) and Extreme Power technology. Face and shoulder tanners work exclusively with the efficient, powerful Ultra Performance technology. The impressive appearance of the chassis is reflected in the tanning room. The enormous tanning tunnel and the extra-wide Multi Relax base acrylic with armrests and adjustable footrests ensure unlimited freedom of movement and an absolutely relaxed posture. Climatronic Plus with acrylic plates at the head and foot ends create an enclosed tanning room in which the desired temperature is kept constant throughout the tanning session. The Aqua Fresh & Aroma function provides additional freshness. The new 3D-Sound system with a Subwoofer turns the tanning tunnel into a concert hall. Individual music programmes can be entered via an MP3-Dock-in and SD-Card-Slot. The innovative control panel with large light symbols, full-text operating instructions and Voice Guide makes controlling all the tanning functions especially easy.

The Prestige Series provides power variations for all tastes. The Dynamic Power model Prestige 990, with 52 UV lamps and 4 facial tanners, has an impressive UV performance and can be used flexibly (see info box). The Prestige 990 is also available with an IQ-Sensor. The Prestige 1100 Extreme Power does full justice to its name. With 52 UV lamps and a combination of 4 high-pressure units and 3 UV-B spaghetti lamps in the facial area, the professional sunbed is clearly top of the power league.

Premium quality surfaces and brilliant special-effect finishes give the top series a particularly fine appearance. The fascinating light design with illuminated Mood Lights is a real eye-catcher. Whether it is sharp colour combinations or harmonious colour compositions, each model in the Prestige series has its unique character. Prestige 990 is available in avant-garde Fashionpink Orange, exclusive Shining Blue or elegant Silverpearl Blue. The Prestige 1100 has an especially spectacular presentation in Mystic Black.

ESPRIT SERIES

Expressive shapes and colours, combined with Mood Lights, define the unmistakable look of the Esprit Series. Here, too, the spacious tanning tunnel and the wide Multi Relax bed with armrests and adjustable footrests ensure more space and absolute relaxation during tanning. The Esprit Series is available with Climatronic and the refreshing Aqua Fresh & Aroma function as an extra option. The new 3D-Sound system, including Subwoofer, MP3-Dock-in and SD-Card-Slot, gives the tanning customer individual music enjoyment. The innovative cockpit control is especially user-friendly (identical in construction to the Prestige Series).

But the internal features are also guaranteed to thrill: all Esprit 770 models are equipped with the future-oriented Dynamic Power technology (see info box), 48 UV lamps and 4 Ultra Performance facial tanners as standard. The new high-pressure shoulder tanner with Ultra Performance technology completes the equipment. All Esprit models can also be ordered with an IQ-Sensor – for a tailor-made tan from head to toe.

The design of the Esprit series has striking edges and expressive shapes. Illuminated Mood Lights skilfully set the stage for the sunbed. Its perfect performance is rounded off by the high-grade appearance of the surfaces and the brilliant special-effect finish. There are three superb colour designs to choose from: fashionable Candy Orange, cool Ice Blue or snazzy Silverpearl Red. This means that the Esprit series will fit harmoniously into any tanning salon atmosphere.

AFFINITY SERIES

Die Affinity Serie vereint klassische Eleganz mit innovativen Ideen: So lassen sich z. B. The Affinity series combines classical elegance and innovative ideas: for example, a simple change of lamp will suffice to vary the colours of the Mood Lights and Ambient Light. The new Body Shape base acrylic guarantees a relaxed tanning session. The new 3D-Sound system creates an impressive sound. The audio package, available as an extra option, contains an MP3-Dock-in, an SD-Card-Slot and a Voice Guide for easy sunbed control. All the Affinity models are equipped with the Ultra Performance technology. The combination of optimised glass reflector and specially coated filter glass stands for a new kind of efficiency in the facial tanning area.

The Affinity 950 will satisfy your most demanding salon customers with unbeatable power from a total of 20 high-pressure units in the canopy and 19 UV lamps in the base. The Affinity 880 & 800, with 50 UV lamps and 4 Ultra Performance facial tanners, have a first-class tanning power as well – with the flexible Dynamic Power technology (see info box), the energy-saving Smart Power version in the Affinity 880 or the Twin Power version in the Affinity 800. The Affinity 660 & 600, with 46 UV lamps and 3 Ultra Performance facial tanners, are also available with flexible Dynamic Power, energy-saving Smart Power or Twin Power technology. The Affinity 500, with 43 UV lamps, is available in Twin Power or Super Power versions with 3 Ultra Performance facial tanners. All Affinity models with Dynamic Power technology are also available with an IQ-Sensor – for a tailor-made tan from head to toe.

The Affinity series will give any tanning salon new vitality with its elegant styling. The silver-coloured chassis and the high-gloss Titanium or Light Silver décor give the sunbed an appearance that is both sophisticated and powerful at the same time. The adjustable Mood Lights, in Blue, Yellow, Red or Magenta, give the model a dynamic look with a magical attraction. The Ambient Light, which is adaptable to suit the colours, creates an exciting appearance and bathes the cabin in atmospheric light.

OPEN SUN 1050

A real power package is celebrating its premiere in the Open Sun series. The Open Sun 1050 has an impressive 30 Ultra Performance high-pressure units. The computer-calculated design and arrangement in 5 segments creates a UV geometry that guarantees an intensive and balanced tan. Open tanning has never been as powerful as this. But on account of its open construction and powerful body ventilation, you will still never start sweating. Comfort features such as the Multi Relax base acrylic, the new 3D-Sound with an MP3-Dock-in and SD-Card-Slot and the user-friendly operating panel with an LED display make tanning an unforgettable experience.

The design of the Ergoline Open Sun 1050 is also unusual. The modern Sterling Blue and the dominating shape language of the sunbed demand respect at first sight. The base acrylic seems to hover, giving it an appearance of sublime lightness. The impressive chassis, the fascinating Ambient Light and design details guarantee a powerful appearance in the salon.

You can obtain detailed information on all these new products from your Ergoline partner or in the internet at www.ergoline-international.com
